Welcome to Red Hat Certification World!DRAFT

If you were able to read this, that means you have managed a lot in the world of Red Hat Certifications! Wonderful step when you continue the certifications path with Red Hat Certified Specialist in OpenShift Administration (EX280) Capsules book which will help you prepare and practice for the exam.

We will walk together through the exam objectives; which is publicly available in the EX280 Exam Objectives Section in Red Hat official site; that are required before going to the actual exam. Practicing a lot is a key point here, so, please, practice, practice, practice!

We will review examples for each objective point from EX280 exam objectives that will let you get ready for the actual exam.

To make it clear! This is not the actual exam of-course as this is violating Red Hat exam NDA "Non Disclosure Agreement"! This is for Educational purposes only to get you ready for the exam and get your hands dirty with more practices and examples! Also, I will never ever explain each and every word I'm talking about here! I follow the capsules concept. If you need something else, you will find many; and I mean it; many resources out-there which cover the theoretical and other stuff in more details. Are we clear?!

By the way, you can manipulate and customize anything mentioned in the book as much as you want for the purpose of practicing things very well, why not! Just please revert it back or keep what we've mentioned in the capsules there; if it does not conflict with any other things you would put/change; when done with

practicing so we can follow up and continue with our capsules!

What will be included in the book to be able to master Red Hat Certified Specialist in OpenShift Administration (EX280) Exam:

- * Practice working with OpenShift Container Platform through command-line interface to manage and configure an OpenShift cluster ...etc
- * Manage Users, Groups and Policies!
- * Control access to different types of resources!
- * Networking in Openshift is a core component!
- * Configure pod scheduling!
- * Exam tips and tricks ;) ! and many more...

Again; all this will be in a short, simple, and easy to implement "Capsules" that will allow you to understand easily and quickly with simplicity what is needed and how to implement it even in real life! Capsules are short and direct to the point so let's keep it like that!

This is also important and let us make it clear:

I'm assuming that you are already familiar with OpenShift Container Platform and Kubernetes and/or having enough experience with Red Hat OpenShift Container Platform administration tasks. I assume also that you have attended Red Hat OpenShift I: Containers & Kubernetes (DO180) and Red Hat OpenShift Administration II: Operating a Production Kubernetes Cluster (DO280) (However attendance in these classes is not required; students can choose to take just the exam) or having equivalent experience. I will explain in-short what I'm doing to keep the capsule simple and easy! But, please make sure you are really familiar with RHCS in OpenShift Administration exam topics in order not to be unsatisfied with the capsules! As mentioned before, there are lots of resources and books out-there for learning such things. Here you will get ready for the exam through Capsules! Are you ready ?!

One favor is required from you: Your feedback matters to me, so, please let me know your feedback and your review about this Book.

Please write your review in the website where I'm publishing this book "i.e. Amazon, or others". You can also send me your feedback either to my E-mail or
